

Pre-wrapping

Unravel the grip. You can either remove the clear plastic coating now, before you start wrapping, or as you are wrapping the handle. See step by step instruction on how to wrap the grip on the handle.

Step 1: Have the tip of the racquet facing down and the end cap facing up. Line up the "Start" with the largest bevel. Make sure the grip is flush to the bottom of the handle. The "black line" should line up close to the "edge of bevel 3."

Step 2: Wrap the grip by covering the “green wrap guide.” As you are wrapping, line up the “blue line” and “red line” over the “edges of bevel 3.” Take note, in this example there is a “blue line” and “red line” but there could be a different color on your grip model.

Step 3: Continue to wrap the grip around the racquet by overlapping approximately 1-2 millimeters. In this step you will need to pull a bit more than other steps to line everything up. Use the colored lines as guides for alignment. The lines and letters should line up straight vertically if wrapped correctly.

Step 4: Continue to wrap the grip around the racquet by overlapping approximately 1 millimeter. Use the colored lines as guides for alignment. The lines and letters should line up straight vertically if wrapped correctly. At this point you are getting to the “full colored bevels.” The full colored bevels should line up as shown and cover the bevel it is on.

Step 5: Continue to wrap the grip around the racquet by overlapping approximately 1 millimeter. Use the colored bevels as guides for alignment. The colored bevels should line up straight vertically if wrapped correctly. After wrapping all the way to the end take the “sticky tape” and complete the wrap.
